WORK EXPERIENCE

Oct 2013 - Now
Senior Web Developer + DevOps
Sunbytes

Sunbytes Co.Ltd
Outsourcing company.

Started with a part-time job from 10/2013 till the end of 11/2013 then working full-time job from 12/2013.
Got training for EQ, emotions manage, time manage skill.

DevOps Position

Overall 3+ years of IT experience as a DevOps position, which includes detailed technical knowledge and experience of Build Engineering and Configuration Management processes, tools and best practices. Extensive hands-on experience in the creation of robust, flexible, automated solutions for Build and Deployment process and Environment Management.

Skills:
Programming Language & Framework: Bash Shell, Go, Python, C++, PHP, NodeJS, ReactJS, Codeigniter, ZendFramework, Symfony Framework, MSSQL, MySQL, PostgresQL, Git, SVN, Jira, Bamboo, Ansible, Puppet, Jenkins, Rational System Architect

OS Windows, Unix, Linux, Solaris and MacOS.

Responsibilities:

• Involve in implementing change management processes while fixing the existing code to enhance the code or bug fixing.

• Managing web apps (FE/BE/API) by installing/upgrading, deploying, configuring/updating data source connections and config property files on all non-prod servers.

• Providing automated monitoring, reporting and analyses for all aspects of the DevOps environments configured nginX, Apache and config files.

• Using Puppet and Ansible for cloud provisioning, configuration management, and application deployment.

• Creating post-commit and pre-push hooks using bash-shell in git repos.

• Research, applied auto-deployment strategy for many projects on Google Compute Engine, Amazon EC2, Amazon S3, and many other cloud services.

• Managing and supporting other developers for all deployment and server stuff.

Achievements:

• Gained experiences on DevOps skills:

- K8: (manage with) Rancher, Longhorn (for volumes), LoadBalancer, HA Proxy, Apache Kafka (for messaging), EFK (ElasticSearch, Fluentd, Kibana), Helm Chart (for deploy), Scale, SLIs SLAs SLOs, ...

- Code: code-review, SonarQube (code quality)

- Server: Linux, MacOS, VMWare, Apache web service, Firewall, Puppet config, Ansible

- Deploy: CI/CD with Travis, GitLab CI, Circle CI, Rancher pipelines, Jenkins

- Cloud service: Google Computer Engine, Google API, AWS EC2, AWS S3 server, ...

- Monitoring: Prometheus, Grafana

Senior Web Developer

Responsibilities:

• The first project was butlerboard.com, the platform where users can bid for their online jobs.

• Supported on other projects based on WordPress CMS for company and clients.

• Designed architecture and programmed for the PON project. This's the tool for calculating and comparing cars for big manufacturers such as Volswagen, Audi, BMW, ...

• The third project is the very huge one, mijn.kwadraad.nl. We took over from the developers from the Netherlands. This project is still in maintenance and development. It has been started to rebuild with new technologies: Symfony 4 + API Platform, deployed (as microservices) on Kubernetes which is managed by Rancher. My main role is Backend Developer and takes care of DevOps positions for this project.

• Designed reusable components by utilizing various standard frameworks.

• Evaluated requirements and initial mock-ups; made technology recommendations that supported optimal construction, maintenance and performance.

• Beside that, i also programmed for some internal tools for company and clients, such as convert.mijnstaging.nl (convert webpage to PDF or image with wkhtmltopdf library).

Achievements:
• Bring high value to the company.
• Support on many situations, issues, problems … from colleagues.

Aug 2007 - Oct 2013
Web Team Leader
MSS Co.Ltd

MSS Co.Ltd
Mobile Solution Services and Digital marketing company.

Senior Software Developer & Team Leader
Lead 3-5 person team. Worked closely with other developers to plan and programmed all the websites.

Responsibilities:
• Set priorities, assigned tasks and gave feedback to developers on the team.
• Collaborated with QA, designers, network administrator to assess ROI, prioritize needs and produce high quality software changes.
• Identified key software architecture decisions, discussed with the team to plan best structure for future feature additions.
• Implemented coding changes to search engine algorithms and transaction processing systems.

Achievements:
• Contributed to made too many websites for company and company's clients.
• Increased speed of development cycles.
• Gained a lot of technical experiences, solving-problem skills and time managing.
